PARAM SHAVAK
PARAM Shavak - Supercomputing Solution in a Box

PARAM Shavak multi-processor High Performance Computing Facility with 10 physical computational resource Capacity building with advanced technologies to perform high-end computations for all IITC, e-processing and academic programs to address and catalyze the research among building, simulation and data analysis.

Key Features

- Scalable in a 150 system in a rack top mode
- 100 cores with 2.8 GHz CPUs each with 16 cores with accelerator card
- 10 TB of RAM
- 2.5 TB High peak computing power with 8 TB of storage
- Easy to deploy solution with no additional hardware infrastructure
- Pre-installed with parallel programming, development tools and libraries
- Pre-installed tools for scheduling and resource management
- 100 TB Storage, backup materials and user manuals etc.
- Supports HPC workloads: DFT/ML
- Supports Applications: Bioinformatics - Cheminformatics

100+ HPC Applications

- Bioinformatics: PROBFAST
- Materials Science: QMOMACS
- Quantum Chemistry: NWChem, ABINIT
- Astrophysics and Ocean Modeling: WRF, WCM

Notes to the Accounts Forming Part of Balance Sheet as on 31st March 2023
Hanuman Vyayam Prasarak Mandal's
College of Engineering and Technology, Amravati

- The books of accounts are prepared on historical cost convention, on going concern basis and adopting merchantile system of accounting. There by income and liabilities are usually accounted as and when they are due while expenditure is accounted for when incurred whether actually paid or not. However, provision for expenses other than salary has not been made.
- Fixed Assets have been stated at their written down value. However, no depreciation has been provided for since FY 2014-15.
- Cash Balance at the yearend has not been physically verified.

20. BEST PRACTICES

Following are the Two Best practices of Institution

1. 'Skills enhancement program for employment ready Graduates' and
2. 'Innovative projects for inculcating the spirit of research & development'
3. 'Universal Human Values'

1. Title of the practice:

Practice-1: 'Skills enhancement program for employment ready Graduates'

2. The context that required the initiation of the practice

There is a huge gap between academic practices of producing the Engineer graduate and Industrial requirement. Most of Industry wants to have the competent graduate to serve in their industry. Whereas College graduate have to undergo with predefine syllabus of affiliated University, which is not flexible. Therefore out of box Industry relevant syllabus is needed to conduct apart from available course curriculum. Therefore it is necessary to breach the gap between Industry's expectation and fresh Engineering College graduates attributes acquired after undergoing university curriculum and syllabus. Hence the best efforts by teachers from the College are essential. Due to this practice students shall get qualified by university degree along with flying colors of knowledge and skill. Even though the same is necessary to get benefitting employment in industries but it is not sufficient as per industry's benchmark. To mitigate the challenges, it is necessary to identify the gap precisely and correctly to develop mechanism and structure to bridge it. To Frame and implement 'Beyond syllabus course contents' of required skill set is the motto of practice.

To implement the scheme, following is the process undertaken:

1. Identify industries that would support the initiative with Institute
2. Proposal for Industry Institute interaction and collaboration
3. Identify gap between University Curriculum and Industry expectations
4. Design the curriculum, syllabus and scheme of training
5. Get it validated from Industries
6. Identify internal & external resources to implement the scheme
7. Motivate & train the identified internal resources
8. Identify and motivate the students who undergo beyond syllabus activity with focus and discipline
9. Involve Industry for training, internship and evaluation
10. Market the practice to user Industry and arrange for placement drives

3. Objectives of the practice

The Engineering graduates unemployment is surprising. To identify the cause of unemployment and practice of employability enhancement skill is the basic objective. The gap between University curriculum and dynamic expectation of Industries is one of the causes of the same. While University curriculum is based upon the fundamental principles of science and engineering and the Industry expect ready employable fresh graduates to start working immediately. The principle and concept of the practice of requisite skill is to inculcate communication skill, soft skill and domain specific technical skill as per expectation of Industries and in association with the Industries.

4. The Practice

In this activity, training is provided to students through Core Technical Area (CTA) in various domains. The CTA for information technology include software testing, software development, information security, Remote infrastructure maintenance and management, networking. The core technical areas for electronics and telecommunications includes Embedded with IOT, MATLAB programming and for mechanical engineering includes Automation, engineering services (CAD), Testing. Under CTA, different activities are conducted like foundation course for third year, Summer Internship Program and Advance course for final year. The live interaction with industry personnel is

done through online session as well as through personal interaction. The placement brochure containing details of information about practices is published and circulated to user industries. Head of Department, faculty and training and placement officer (TPO) visit the industries and arrange for campus placement drives. The structure of CTA is depicted below.

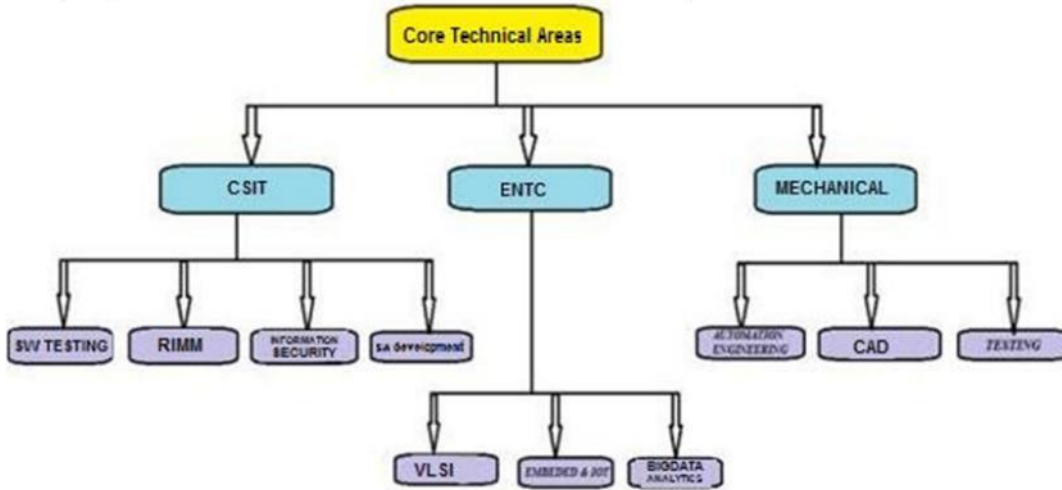

Fig.1 Technical Skill Enhancement through CTA

5. Obstacles faced if any and strategies adopted to overcome them (150 – 200 words) Definitely, when we start to communicate the Industry and its expectations, we face the lot of problems right from whom and how to contact the Industries. The following stages were adopted:

1. Form the faculties group of each department.
2. Identify and enlist the suitable industries.
3. Communicate with the industry by mail and express your will.
4. As it is needed by both sides, they have also given positive responses.
5. I visited the small and medium-scale industries in Nagpur and discussed the matter.
6. MOUs with industries for specific purposes and
7. Obstacles in industry communication get resolved

6. Impact of the practice

The participation and involvement of industries in the design, validation, and implementation of course content, as well as providing internships and evaluations of projects, is overwhelming. The placement records improved. This practice has proved that the selection of CTA students is much higher than that of non -CTA students. The feedback from industries about the performance of CTA undergone students is on par with that of one -year industry-trained graduates. It can be inferred that the project and practice of CTA give the industry acceptable and employable fresh engineering graduates. It confirms that this practice is good for engineering graduate employability because it bridges the gap between institute outcomes and the expectations of industry.

7. Resources required:

The following problems or constraints were encountered during conceptualization, design, validation, and implementation of the practice:

Industry academic connectivity to interact with industry experts

1. Student’s interest in working with the core technical area apart from the regular course
2. Design the curriculum and syllabus in consultation with industry to bridge the gap.
3. Validation of the course curriculum and implementation scheme from industries
4. Human resources from the college to motivate them for extra responsibility

5. Additional training for faculty is required to acquire new skill sets and knowledge.
6. External sources to supplement practices with industry perspectives
7. Sufficient financial fund provision for training and development of in-house faculty or by deputing them to industries, institutions of higher learning, or professionals; also, financial constraints for hiring professionals
8. Virtual setups for online interactions with industries
9. Marketing practices with user industries

BEST PRACTICE: 2

1. Title of the practice:

Practice-2: 'Skill based Innovative projects for inculcating the spirit of research & development'

2. The context that required the initiation of the practice

The inculcation of research culture, critical and creative thinking, and sensitization towards social and environmental issues for which optimal solutions can be found using technology is a challenging task. The implementation of practice involves a team of heads of department, young, enthusiastic faculty, a training and placement officer, and interaction with industry experts and researchers. The identification of the statement of the problem itself is a challenge. The present education system is tuned to writing answer scripts for the expected questions either from old question paper sets or text books, while engineering always encounters unexpectedly challenging problems that are required to be solved under constraints of time, human, and financial resources. This real-life experience through innovative projects posed many challenges during the implementation of the schemes.

3. Objectives of the practice

The application of knowledge and skill for solving real-life problems is the main job profile of professional engineers. Mini and major projects carried out during the course of study give an opportunity to acquire the skills of application of principles of science and engineering. The engineering solution has to be economical, optimum, societal and environmental friendly, and most importantly, innovative. The attributes of aptitude for innovative, critical, and creative thinking are a challenge. Institutions consciously work on innovative projects to train young minds to be future-ready through their practices. Teachers also get oriented towards research and development, publications, and patents.

4. The Practice

A team of teachers from various technical domain areas and interests is identified to lead the group. The faculty is expected to advise, guide, and facilitate project development with students. The faculty is given special training either in-house or by deputies at industries, institutes of higher learning, or training centers. The students are identified on the basis of a detailed analysis of their academic background, area of interest, flexibility to learn, and attitude to accept challenges. They are groomed by giving beyond the syllabus core technical area knowledge and skills through a structured programme of about 120 hours during their third year of study. Industry inputs are also sought during the training of the students. The statement of problems is identified from various sources like industry, analysis of social needs, thrust areas like clean energy, digital India, safety and security of women, and as given by various state and central ministries on their websites. A team of faculty and students designs and develops the solution, which is implemented as a prototype. The projects are evaluated by industry during various project competitions at the intercollegiate, interuniversity, state, and national levels. The practice becomes the novel teaching and learning process, as the concepts of self-learning, flipped learning, cogeneration of knowledge, participative learning, and collaborative learning experience result in novel ideation and optimal solutions for real-life problems.

5. Obstacles faced if any and strategies adopted to overcome them

The change in the teaching and learning process of the technical education system is an obstacle, as it requires the motivation and persuasion of the faculty and students to go beyond the university

curriculum and syllabus. Support from industry to identify the real-time problem and validate innovative solutions is another obstacle to the practice. The training of faculty for domain-specific skills and the opportunity for exposure in advanced technology laboratories pose new challenges. The financial resources needed to create a facility for experimentation for innovative projects are also a challenge.

6. Impact of the practice:

The impact of practice on the development of innovative projects on real-life problems is

1. Lab-to-land projects are done.
2. The innovative projects, developed on organic solid waste like waste from vegetables, fruit markets, and eating houses, were successfully implemented by Amravati Municipal Corporation. The project is based on solid waste management rules and regulations from 2000, 2004, and 2016. It is a decentralised waste management system that gives wealth from waste.
3. An innovative project on the plastic waste management system was also developed and implemented by the Amravati Municipal Corporation. at Sukali Waste Depot
4. A senior faculty member of the institution selected for nano-technology-based innovative project development at the IIT Bombay laboratory
5. Faculty and teaching staff of the college are also working on innovative projects under the same scheme as the Government of India at IIT Bombay. The projects are successfully developed, and patents are published on the work.
6. Senior students undertake mentoring and conduct training and competitions for junior students on the same concept and process.
7. Unnat Bharat Abhiyan technology-based projects for villages are developed.
8. AICTE has announced the world's largest innovative project competition, the Hackathon. The innovative idea of students and mentors of our college on the theme of "Smart watch for being watched" for the security of women and children is shortlisted for the final round.
9. A project team of third-year students is also shortlisted in the Texas All India Level Project competition.
10. The students have developed innovative projects during their internships based on the problem statements given by industries.
11. The faculty and students have successfully developed innovative projects on advanced technology and received awards in inter-collegiate research project competitions ("Avishkar") of affiliated universities.
